

# LEED® COMPLIANCE DOCUMENT

We Lead you  
to Sustainability and  
Energy efficiency

*Although Qualitynet believes that the products examined can contribute to a LEED® certification, it is recalled that, globally, only GBCI (Green Business Certification Inc) can assign the scores and issue a LEED certificate. Recalling that the LEED rating system certifies the building and not the materials, Qualitynet does not guarantee the achievement of the building's final score.*

**Dott.ssa. Iris Visentin LEED AP BD&C**

# TROCELLEN

## ENVIRONMENT AND SUSTAINABILITY

### COMPANY

Trocellen is a manufacturer of cross-linked PO foams. Together with our Japanese owner, Furukawa Electric Co. Ltd., we are heading for global success. With more than 600 employees at seven sites and many cooperating companies, various partner universities, institutes and designers we offer solutions for a wide variety of industries and applications. Via our diverse business units, we meet industry-specific requirements and continuously develop innovative products for all kinds of needs. We produce finished goods, semi-finished products and raw materials for the consumer market and for our partners in various industries such as automotive, construction and insulation, leisure and professional sport, adhesive tapes, footwear and packaging

Through the great variety of our products we provide people with a warm and quiet home and working environment. We make travel comfortably and safe. We help

them enjoy their leisure activities and protect their health at the same time. We make fashion secure and security stylish. We develop solutions and realize a great variety of professional projects in cooperation with our partners.

Trocellen was founded as a new company and brand of Dynamit Nobel and HT Troplast. The name and the products quickly built up a strong reputation and Trocellen soon became a successful brand of the company. With headquarters in Troisdorf, Germany, the evolving and transforming company has since opened or acquired various production plants in Germany, Italy, Spain, Hungary and Malaysia.

## Vision

*WE ALLOW PEOPLE TO FIND WELLNESS - WE ACCOMPANY THEM TOWARDS A BETTER FUTURE*

Trocellen plans a safe and comfortable future through innovation in these sectors:

- Home and work
- Advanced mobility
- Health, Sport and Wellness

Our products make people's lives lighter by allowing them to focus on what they love to do most continuously, worry-free and with peace of mind.

## Mission

*TODAY OFTEN WE ARE FACED WITH DIFFICULTIES THAT REQUIRE SPEED SOLUTION AND TROCELLEN IN THIS IS READY TO HELP PEOPLE BY CREATING RELIABLE SOLUTIONS*

Advanced solutions for industry and consumption, improve life in a tangible way and ensure a lighter future. As an industry leader, we build trust, respect business relationships and contribute to global sustainability efforts, at every specific moment. For us there is no diversity and we recognize the individual value of people and with them we want to build lasting success.

## Values

### *INNOVATION*

We never stop trying to improve even our best solutions.

### *TALENT*

We hire the best talent and continually develop our talent pool to stay the best.

### *DIVERSITY'*

Feeling comfortable in different markets and industries comes from a diverse knowledge base as well as from well-organized activities: we are as diverse as the needs and requirements of our partners.

### *RESPONSABILITY*

We always keep our partners' interests in mind and consider the environmental and social impacts of our actions under any circumstances.

### *PARTNERSHIP*

Thought and collective work are closely linked to the success of a company, which is why we aim to build long-term partnerships.

## Certification

In order to provide stable, high-performance products and services, Trocellen pays special attention to quality assurance. We are focused on monitoring and improving all our products, management and customer services. We are dedicated to continuous development in all areas that can influence the performance of our products and services, and positively influence cooperation with our partners and customer satisfaction. All our activities are customer focused. In order to meet their expectations, we conduct surveys concerning customer satisfaction, encouraging both the employee and the client to open and honest communication.

## Corporate Social Responsibility

Trocellen believes that the market position, advanced technology and vast production and business activities require to be more responsible and to make a greater contribution to the development, sustainability and security of the business, the environment and society. Below you can find the link to consult detailed information about the guidelines and social responsibility activities of our company, including the Corporate Social Responsibility:

<https://trocellen.com/sustainability/strategy-and-governance/compliance/>

## ESG Organization

Being a sustainable, responsible and reliable organization, to support our ambition, the Trocellen Group has set up an ESG governance structure at group level. The Sustainability Advisory and Decision-Making Committee is comprised of the highest levels of management to ensure ESG considerations are part of all strategic decisions and provides support to all divisions to implement ESG considerations in all day-to-day operations.

Responsibility for a sustainable future is universal, but to achieve this we need individual commitments and systematically executed own actions. At Trocellen we believe we have an important role to play in this sector, so after careful evaluation and planning, we have laid the foundations for our corporate sustainability strategy. We have identified goals that we cannot give up under any circumstances, as well as activities where we can have the greatest positive impact on the future.

Based on our materiality assessment, the Trocellen Group has defined 10 focus areas for organizing ESG programs and related actions:

**Environment and Climate:** We are committed to protecting our planet by working for a circular economy and for mitigation and adaptation to climate change

**Society & Employees:** We create a safe and attractive workplace and contribute to our local companies

**Governance & Management:** We manage our risks with responsible and comprehensive governance

The Trocellen Group aims to contribute to sustainable development in many ways. Considering our corporate activities, we take into consideration the 5 SDGs, in which Trocellen has a direct impact:

- 8. Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all
- 11. Make cities and human settlements inclusive, safe, resilient and sustainable
- 12. Ensure sustainable consumption and production patterns
- 13. Take urgent measures to combat climate change and its impacts
- 17. Strengthen the means of implementation and revitalize the global partnership for sustainable development

For more information see the link:

<https://trocellen.com/it/sostenibilita/strategia-e-governance/>

## Certifications

Trocellen has obtained and maintains the following certifications:

- ISCC PLUS certificate - International Sustainability and Carbon Certification
- ISO 45001 - Occupational Health and Safety Management Systems
- ISO 9001
- ISO 50001 - ISO 50001: 2018 IIP and ISO 50001: 2018 IQNET
- ISO 14001 - ISO 14001: 2015 IIP and ISO 14001 IQNET

For more information see the link.

## Trocellen Method

Trocellen is much more than just a manufacturer of foams and raw materials. True, foams and related technologies are our business, but our business also focuses on deep industry expertise, extensive business experience and established partnerships, through design and development capabilities, through effective processes and learning and growth skills

The TROCELLEN METHOD is Trocellen's unique approach to integrate the entire value creation process, from material design to advanced products and solutions, creating value for the industry, for our partners and for end users.

What distinguishes our foam-based solutions within the markets where we operate?

- Optimal processes that arise from needs and end with products and solutions ready for use or application,
- Wide knowledge of foams, ability to shape the final solution also through the study of molecules,
- Wide range in terms of skills and competences for development, production and know-how conversion,
- In-depth knowledge and valuable information on different sectors,
- Reliability and trust: our partners, with whom we have solid and lasting relationships, know they can count on us,
- Long-term beneficial partnerships based on thought and cooperation to achieve solutions of excellence,
- Professional services,
- Real solutions for the needs of our partners and the industry.

## APPLICATIONS AND PRODUCTS

### THERMAL INSULATION

#### TROCELLEN CLASS

TROCELLEN CLASS ADHESIVE Chemically cross-linked, closed cell polyethylene foam. Euroclass B-s2,d0 – BL-s1,d0 for thickness 3-12 mm.

TROCELLEN CLASS ALU ADHESIVE Chemically cross-linked, closed cell polyethylene foam, laminated with aluminum sheet. Euroclass B-s2,d0 – BL-s1,d0 for thickness 3-14 mm; Euroclass C-s2,d0 – BL-s1,d0; thickness range: 15-24 mm.

TROCELLEN CLASS ALU.S ADHESIVE Chemically cross-linked, closed cell polyethylene foam, laminated with aluminum sheet. With improved performance. Euroclass B-s2,d0 – BL-s1,d0; thickness range: 3-16 mm Weather resistant and can also be used outdoors.

TROCELLEN CLASS G-PRO Chemically cross-linked polyethylene foam in gray color, with closed cells, with low thermal conductivity (0.0379 W / mK at 10 C °) and high fire resistance performance. Covered with expandable graphite-based coating. • Euroclass B-s1, d0 - BL-s1, d0 for thicknesses 3-40 mm

#### TROCELLEN DUCT

TROCELLEN DUCT CL1 - naked

TROCELLEN DUCT CL0-2 ALU – type N, laminated with smooth or embossed low thickness aluminum

TROCELLEN DUCT CL1 ALU – type CL1, laminated with smooth or embossed low thickness aluminum

TROCELLEN DUCT AL CL1 – type CL1, laminated with metallic, embossed, scratch-resistant PE film

TROCELLEN DUCT AL CL1 REF – type CL1, laminated with a metallic polyester film

TROCELLEN DUCT CL1 ALU-NET – type CL1, laminated with low thickness, screened aluminum. Has been classified “Class 0 surface” according to English law BS 476-Part 6/7, in the thickness 13 mm.

#### TROCELLEN SLEEVES

TROCELLEN N - Chemically crosslinked polyethylene foam, without flame retardants

TROCELLEN P - Chemically cross-linked foam, laminated with scratch resistant embossed polyethylene film.

TROCELLEN AL - Chemically cross-linked foam, laminated with scratch-resistant embossed metal film.

TROCELLEN AL/CL1 - Chemically cross-linked foam with fire retardant additives, certified Class 1, laminated with scratch-resistant embossed metallic film.

TROCELLEN CLASS AL (marked CE) - Trocellen Class represents the range of products with the CE mark and Euroclass classification, in accordance with the EN 14313 standard. Chemically cross-linked closed cell foam sleeves, colour light green, laminated with scratch-resistant embossed metallic film.. Also available TROCELLEN CLASS P, with scratch-resistant and embossed PE film.

## TROCELLEN ISOCOMPACT

### TROCELLEN ISOCOMPACT - AL/CL1 - CL1/ALU-NET

Chemically cross-linked, closed-cell, insulating material, light grey. Multi-layered product, thickness 10 to 15 mm, certified in Class 1 according to UNI 8457/UNI 9174 and finished outside with an embossed, scratch-resistant, metalized film, or with reinforced aluminium layer.

### TROCELLEN CLASS AL ISOCOMPACT (marked CE)

Cross linked polyethylene closed cell, high thickness insulating foam for piping, light green, multi-layer, externally finished with a metalized embossed antiscratch film.

## TROCELLEN HIGH-TEMP

Product range composed of a closed-cell, chemically cross-linked polyethylene foam, finished outside with an embossed scratch-resistant film and coupled with polyester non-woven. The product is available in sleeves, thicknesses 13 and 20 mm, and in rolls thicknesses 15 and 20 mm. It is certified class 1 according to UNI 8457 and UNI 9174.

## TROCELLEN ROLLS

TROCELLEN N - Dark gray color, does not contain flame retardants. Over 7 mm thick, it complies with the flame speed specification lower than 100 mm / min required by US standards - FMVSS 302 and German - DIN 75200.

TROCELLEN NP N type, laminated with scratch resistant embossed metallic polyethylene film

TROCELLEN AL - N type, laminated with scratch resistant embossed black polyethylene film

TROCELLEN AL REF - N type, laminated with a metallic polyester film

TROCELLEN CL1 Light grey in colour, produced with flame retardant additives to make it conform to the standards for the category, for example TROCELLEN CL1 Italy, M1 France, etc.)

TROCELLEN AL/CL1 - CL1 type, with embossed, scratch resistant metallic PE film

TROCELLEN AL/CL1 REF - CL1 type, with embossed, scratch resistant metallic PET film

TROCELLEN CL1 ALU - CL1 type, with low thickness smooth or embossed aluminium

TROCELLEN CLASS OEM (not CE marked) - Euroclass B-s2, d0 for thicknesses 3-12 mm; adhesive, according to law EN 13501-1, light green

## ACCESSORIES

GASKETS IN: TROCELLEN, EPDM,

TAPES IN AL / C1, AL / CL1 HR and aluminum,

BANDS in TROCELLEN CLASS

GLUE MATIBLOCK

## AIRSILENT

Airsilent Polyurethane foam, based on polyester, flexible, open cells, used for sound absorption

### FLAT AIRSILENT

Types available:

- K: polyester-based polyurethane foam, anthracite colour
- KP: as K type bonded on one side with black embossed polyolefin film
- AL: as K type bonded on one side with metallic embossed polyolefin film
- K-ALU: as K type bonded on one side with aluminium

The black or metallic film covering is applied for protection, making the protect resistant to dust and humidity and prolonging its life span.

### EGG-BOX SHAPED AIRSILENT

Same characteristics as K type

Thickness:

20 mm - 10 mm flat part and 10 mm egg-box shaped

30 mm - 15 mm flat part and 15 mm egg-box shaped

40 mm - 20 mm flat part and 20 mm egg-box shaped

50 mm - 25 mm flat part and 25 mm egg-box shaped

### AIRSILENT TECH

Textile polyester fibres (80-90% regenerated), thermo-welded without resins and glue, density 40 kg/m<sup>3</sup>, color white or green.

## APLOMB

Multilayer product, with one or more sheets of lead, laminated with flexible, damping and sound-absorbing materials. See the AIRILENT 2017 ITA sheet for the different compositions, eg:

### APLOMB 11

- Composition:
  - layer of polyethylene foam (anti-vibration) laminated with embossed black film, 3 mm thick
  - 0.35 mm thick lead foil, weight 4 kg / m<sup>2</sup>
  - layer of open cell polyurethane foam (sound absorbing), 12 mm thick

### APLOMB 22

- Composition:
  - layer of polyethylene foam (anti-vibration) laminated with embossed black film, 3 mm thick
  - 0.35 mm thick lead foil, weight 4 kg / m<sup>2</sup>
  - layer of polyethylene foam (anti-vibration) laminated with embossed black film, 3 mm thick

### APLOMB AL/CL1

- Composition:
  - layer of polyethylene foam (antivibration) coupled with embossed metallic film, Class 1, thickness 3 mm
  - 0.35 mm thick lead foil, weight 4 kg / m<sup>2</sup>

- layer of polyethylene foam (anti-vibration) Class 1, thickness 6 mm

#### APLOMB 1

• Composition:

- 10 mm thick open cell polyurethane foam layer
- 0.35 mm thick lead foil, weight 4 kg / m<sup>2</sup>
- 10 mm thick open cell polyurethane foam layer

### **ISOLMASS**

#### ISOLMASS 11

A three-layer composite product for airborne sound insulation of waste water pipes in plastic and partitions in general. Composed of a heavy polyolefin layer with mineral fillers, laminated on one side with **TROCELLEN** cross-linked PE foam with a thickness of 3 mm, and on the other side with open cell PU with a thickness of 12 mm. Net weight: 4,4 kg/m<sup>2</sup>

#### ISOLMASS 22

A three-layer composite product for impact and airborne sound insulation of floors and walls. Composed of a heavy polyolefin layer with mineral fillers, laminated on both sides with **TROCELLEN** cross-linked PE foam with a thickness of 3 mm. Net weight: 4,2 kg/m<sup>2</sup>

#### ISOLMASS 1 TECH

A three-layer composite product for airborne sound insulation partitions in general. Composed of a heavy polyolefin layer with mineral fillers, laminated on both sides with polyester fiber (PET) with a thickness of 10 and 20 mm. Net weight: 5,2 kg/m<sup>2</sup>

#### ISOLMASS 4 TECH

A two-layer composite product for airborne sound insulation partitions in general. Composed of a heavy polyolefin layer with mineral fillers, laminated on one side with polyester fiber (PET) with a thickness of 20 mm. Net weight: 4,8 kg/m<sup>2</sup>

#### ISOLMASS 4

A single layer product, used as vibration damping for airborne sound insulation of partitions. Composed only of heavy polyolefin layer with mineral fillers, thickness 2 mm. Net weight: 4 kg/m<sup>2</sup>

#### ISOLMASS FR

A single layer product, used as vibration damping for airborne sound insulation of partitions. For applications where it is required high performance of fire reaction (Euroclass). Composed of self-extinguish heavy polyolefin layer with mineral fillers, thickness 2 ÷ 5 mm.

Net weight: 4-10 kg/m<sup>2</sup>

#### ISOLMASS 3 TECH FR

A two-layer composite product for airborne sound insulation of waste water pipes. Composed of a heavy polyolefin layer with mineral fillers, laminated on one side with polyester fiber (PET) with a thickness of 12 mm. Net weight: 3,3 kg/m<sup>2</sup>

## BUILDING

### TROSIL

#### TROSIL 4 mm

Chemically cross-linked, closed cell polyethylene foam, CFC free. Type TROSIL, thickness 4 mm, density 30 kg / m<sup>3</sup>; Certified impact sound insulation  $\Delta L_w = 28$  Db; Apparent dynamic stiffness  $s't = s' = 73$  MN/m<sup>3</sup>.

#### TROSIL 5 mm

Chemically cross-linked, closed cell polyethylene foam, CFC free. Type TROSIL, thickness 5 mm, density 30 kg / m<sup>3</sup>; Certified impact sound insulation  $\Delta L_w = 28$  dB; Apparent dynamic stiffness  $s't = s' = 52$  MN/m<sup>3</sup>.

#### TROSIL 10 mm

Chemically cross-linked, closed cell polyethylene foam, CFC free. Type TROSIL, thickness 10 mm (also available in the version with battens), density 30 kg / m<sup>3</sup>; Certified impact sound insulation  $\Delta L_w = 36$  dB; Apparent dynamic stiffness  $s't = s' = 19$  MN/m<sup>3</sup>

### TROSIL TECH

#### TROSIL TECH 10 mm

Chemically cross-linked, closed cell polyethylene foam, CFC free. Type TROSIL TECH, density 30 kg / m<sup>3</sup>, coupled with non-woven fabric in; polyester fiber, batten, total thickness 10 mm. Certified impact sound insulation  $\Delta L_w = 33$  dB. Apparent dynamic stiffness  $s't = 9$  MN/m<sup>3</sup>

### ACCESSORIES

#### JOIN BAND

Adhesive strips of resilient material for joining insulating sheets from underfloor. Composed of TROCELLEN TROSIL, beige color, without CFC.

#### N BAND

Adhesive strips of resilient material for the perimeter insulation of the flooring. Used to decouple the floor of the wall, they are glued to the undersized cloth thus creating the ideal "tank" for casting the screed. They are produced using chemically cross-linked polyethylene foam, adhesive, anthracite color, without CFC.

#### P BAND

Like Trocellen N Band with 50 mm pre-incision to facilitate "L" laying and with the addition of reinforced TNT to avoid breakage.

#### TROCELLEN D-TAPE

Tape composed of Trocellen polyolefin foam, thickness 3 mm, density 30 kg / mc. To be applied as a decoupling for metal profiles in dry wall systems.

## OTHER

### TR-EECeLL

Trocen bio-based polyethylene foam, suitable for acoustic and thermal insulation. The polyethylene resin comes from sugar cane processing waste, demonstrating the eco-friendly nature of the product.

### DISTRICT HEATING PILLOW

Polyethylene foam with excellent physical and mechanical properties, used to prevent mechanical damage to pre-insulated district heating pipes.

### MILLEFORMA COTTON

It is an acoustic coating for bonding walls and ceilings, to improve the aesthetics and comfort of living and working spaces. It is made of natural material, based on cotton waste mixed with particular high quality clays and colored with natural earths. It is available in 9 standard shapes in different formats, available in 28 colors that can be joined together to create figures with very different aesthetic effects. The production techniques and treatments to which the MILLEFORMA COTTON products are subjected also confer resistance to fire and water, keeping intact the excellent sensory and aesthetic qualities of the finished product.

## CHARACTERISTICS OF SUSTAINABILITY AND SALUBRITY

The TROCELLEN products described contribute to the sustainability of a building through specific characteristics that distinguish them and are summarized in the following diagram.

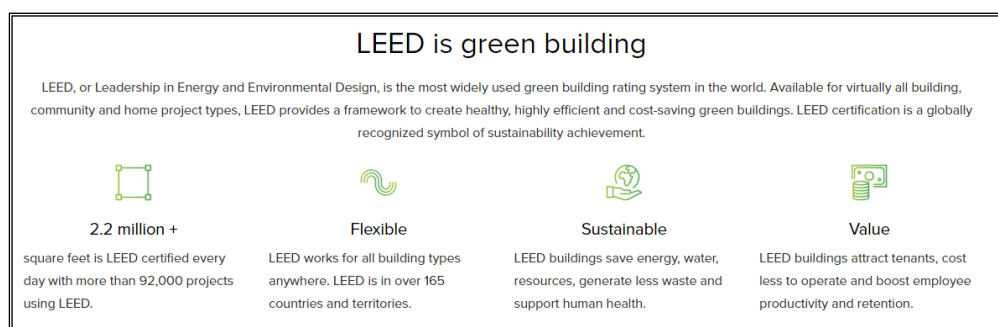

## LEED® RATING SYSTEM

Source: USGBC, GBC ITALIA

LEED® - Leadership in Energy and Environmental Design - is a building certification system that is created on a voluntary basis and is applied in over 140 countries worldwide. The LEED standard was born in America by U.S. Green Building Council (USGBC), a non-profit association founded in 1993, which currently has more than 20,000 members and whose aim is to promote and develop a global approach to sustainability, recognizing virtuous performance in key areas of health human and environmental.

The LEED® standards, developed by USGBC indicate the requirements to build environmentally sustainable buildings, both from the energy point of view and from the point of view of the consumption of all the environmental resources involved in the realization process.

LEED® is a voluntary and consensus-based system for the design, construction and management of sustainable buildings and high-performance territorial areas that is increasingly developing internationally; it can be used on any type of building and promotes an integrated design system for the entire building.

[www.usgbc.org](http://www.usgbc.org)

The certification is an independent third party verification of the performance of an entire building (or part of it) and / or urban areas. The internationally recognized LEED® certification states that a building is environmentally friendly and that it is a healthy place to live and work.

Working on the whole process, from the design to the actual construction, LEED® requires a holistic approach, otherwise the objectives will not be achieved. Only with a wide effort of integrated planning and coordination is it possible to create a harmonious building in all the areas mentioned above.

The competitive advantages for those who adopt LEED® standards, be they professionals or companies, are identifiable above all in the great final quality of the building (building), in the considerable saving of management costs that these buildings allow to obtain if compared with traditional buildings in the certification by a third party.

The LEED® certification, in fact, provides the market with a shared approach, on which to base the choices and a measurable standard for each aspect treated.

The LEED® rating system is structured in a set of protocols (manual) depending on the type of building to be certified. We will therefore have a protocol that certifies new buildings and major renovations

(LEED Nuove Costruzioni, LEED NC, LEED BUILDING DESIGN AND CONSTRUCTION LEED BD + C), a protocol for school buildings (LEED FOR SCHOOLS), a protocol that certifies retail and the interiors of a building (LEED COMMERCIAL INTERIOR and LEED RETAIL), a protocol that certifies existing buildings (LEED EXISTING BUILDING OPERATIONS AND MAINTENANCE, LEED EBOM), a protocol that certifies sets of buildings, eg neighborhoods (LEED FOR NEIGHBORHOOD), and so on.

The setting of all these protocols is the same, in the sense that they are all organized in the same areas or chapters, which are:

- Localization and Transport (LT)
- Sustainable sites (SS)
- Water management (WE)
- Energy and Atmosphere (EA)
- Materials and resources (MR)
- Indoor air quality (EQ)

For the sake of completeness there are two other areas / chapters, which deal with aspects that are more related to the certification process:

Regionality: more credit is given (points) to credits in certain geographical areas due to the strong relationship between the territorial context and the credit requirements;

Design innovation: aspects that are not considered in the specific protocol are valued but are present in the other protocols, or a higher score is given for exemplary performance in some protocol credits. Everything is regulated precisely by the text of the manuals.

All these areas / chapters contain the prerequisites and credits. The prerequisites are mandatory and do not give points, while the credits can be chosen or not by the design team but they are the ones that give the score, which must be achieved to obtain the certification level defined as a certification objective.

The prerequisites and credits concern all aspects of a building, from the installations, to the details of the design, to the permeability of the land, to the consumption of drinking water, to the relationship of the site with the servants near the building or to the availability of public transport. Some of these also concern materials, in the sense that the materials have characteristics that help the building comply with certain requirements defined in the prerequisites and protocols. What was done in this document, in the first instance, was to identify the possible credits that could concern the TROCELLEN products considered in the project, on the other to verify their characteristics and documentation in line with the requirements in the requirements. The credits to which the products can contribute are explained in the following paragraphs.

**The LEED® rating system certifies the building, does not certify the individual products or building components, but the latter can help meet the requirements of the protocol and consequently obtain the relative scores for the building.**

This also implies that the product CANNOT have a score, the score is always and only of the building, but it can help the building get the score.

As already mentioned, in the following paragraphs we will illustrate the excellence of TROCELLEN in relation to LEED® credits. As described earlier in the text, all the protocols are structured in the same areas, and for the most part the credits are the same or similar. In the present work, the LEED BD + C V4 protocol was taken as reference for clarity and to avoid unnecessary repetitions (and which could cause confusion), inserting all the credits of this protocol that could concern the products taken into consideration by this document.

[www.usgbc.org](http://www.usgbc.org)

## TROCELLEN AND LEED® V4 CREDITS

In the following check lists we highlight the credits to which TROCELLEN products can contribute:

LEED for New Construction and Major Renovations (v4)	
<b>LOCATION &amp; TRANSPORTATION</b> POSSIBLE: 16 Credit: Integrative process 1 Credit: LEED for Neighborhood Development location 16 Credit: Sensitive land protection 1 Credit: High priority site 2 Credit: Surrounding density and diverse uses 5 Credit: Access to quality transit 5 Credit: Bicycle facilities 1 Credit: Reduced parking footprint 1 Credit: Green vehicles 1	<b>MATERIAL &amp; RESOURCES</b> POSSIBLE: 13 Prereq: Storage and collection of recyclables REQUIRED Prereq: Construction and demolition waste management planning REQUIRED Credit: Building life-cycle impact reduction 5 Credit: Building product disclosure and optimization - environmental product declarations 2 Credit: Building product disclosure and optimization - sourcing of raw materials 2 Credit: Building product disclosure and optimization - material ingredients 2 Credit: Construction and demolition waste management 2
<b>SUSTAINABLE SITES</b> POSSIBLE: 10 Prereq: Construction activity pollution prevention REQUIRED Credit: Site assessment 1 Credit: Site development - protect or restore habitat 2 Credit: Open space 1 Credit: Rainwater management 3 Credit: Heat island reduction 2 Credit: Light pollution reduction 1	<b>INDOOR ENVIRONMENTAL QUALITY</b> POSSIBLE: 16 Prereq: Minimum IAQ performance REQUIRED Prereq: Environmental tobacco smoke control REQUIRED Credit: Enhanced IAQ strategies 2 Credit: Low-emitting materials 3 Credit: Construction IAQ management plan 1 Credit: IAQ assessment 2 Credit: Thermal comfort 1 Credit: Interior lighting 2 Credit: Daylight 3 Credit: Quality views 1 Credit: Acoustic performance 1
<b>WATER EFFICIENCY</b> POSSIBLE: 11 Prereq: Outdoor water use reduction REQUIRED Prereq: Indoor water use reduction REQUIRED Prereq: Building-level water metering REQUIRED Credit: Outdoor water use reduction 2 Credit: Indoor water use reduction 6 Credit: Cooling tower water use 2 Credit: Water metering 1	<b>INNOVATION</b> POSSIBLE: 6 Credit: Innovation 5 Credit: LEED Accredited Professional 1
<b>ENERGY &amp; ATMOSPHERE</b> POSSIBLE: 33 Prereq: Fundamental commissioning and verification REQUIRED Prereq: Minimum energy performance REQUIRED Prereq: Building-level energy metering REQUIRED Prereq: Fundamental refrigerant management REQUIRED Credit: Enhanced commissioning 6 Credit: Optimize energy performance 18 Credit: Advanced energy metering 1 Credit: Demand response 2 Credit: Renewable energy production 3 Credit: Enhanced refrigerant management 1 Credit: Green power and carbon offsets 2	<b>REGIONAL PRIORITY</b> POSSIBLE: 4 Credit: Regional priority 4
<b>TOTAL 110</b>	
40-49 Points CERTIFIED      50-59 Points SILVER      60-79 Points GOLD      80+ Points PLATINUM	

This chapter describes the way in which the TROCELLEN products analyzed in this document can contribute to the selected LEED V4 credits.

This logo, called the Product Badge, graphically represents a summary of the credits to which TROCELLEN products can contribute consistently with what is described in the following paragraphs<sup>1</sup>.

 <p>contributes to MRC3,MRC4,MRC5,EQP3 EQC1,EQC2,EQC9 credits (BD+C v4) <b>IT04-QN010301</b></p>	<p>AIRSILENT PIANO K AIRSILENT PIANO KP AIRSILENT PIANO AL AIRSILENT PIANO K ALU AIRSILENT BUGNATO K</p> <p>APLOMB 11 APLOMB 22 APLOMB AL/CL1 APLOMB 1 APLOMB 1/B</p>	<p>AIRSILENT</p> <p>APLOMB</p>

## ENERGY AND ATMOSPHERE AREA

The use of electricity produced from fossil fuels, such as oil, natural gas and coal, negatively affects the environment at every stage of its life cycle, starting from the extraction and transport process followed by refining and distribution activities. To reach the final consumption.

A building designed according to sustainable agriculture criteria addresses energy-related issues in two ways. First of all, reducing the building's energy needs: the lower the energy requirement, the less greenhouse gas is emitted to meet this requirement. Secondly, use forms of energy with less environmental impact, such as sources other than fossil fuels.

The credits of LEED NC V4 to which TROCELLEN products can contribute are:

- EA p2 Minimum Energy Performance
- EAc1 Optimize Energy Performance
- EAc5 Renewable Energy Production

## EAp2 Minimum Energy Performance

## EAc2 Optimize Energy Performance

*Intent: The purpose of this prerequisite and credit is to reach an increasing level of energy performance for buildings and project facilities, superior to the minimum values defined by current legislation and legislation, in order to reduce the economic and environmental impacts associated with excessive consumption of energy.*

The prerequisite EAp2 provides the minimum energy performance requirements required for the building.

The EAc1 credit rewards the building's energy efficiency improvements, in particular assigns a score from 1 to 18 based on the building's efficiency percentage compared to the basic building (calculated according to ASHRAE regulations). The percentage is calculated by dynamically modeling the building, which takes into consideration all the components of the building (envelope, plants, etc.) and site conditions (day, night, summer, winter, etc.).

TROCELLEN products are born with high thermal insulation performance. The thermal insulation coefficients of the thermal insulation products considered are shown in the table<sup>2</sup>:

FAMILY	PRODUCT	Coefficient of thermal conductivity a 10°C – EN 12667 W/mK ; kcal/mh°C

## EAc5 Renewable Energy Production

*Intent: To reduce the environmental and economic harms associated with fossil fuel energy by increasing self-supply of renewable energy.*

TROCELLEN HIGH TEMP is a specific product to improve the energy performance of solar collectors.

### CHARACTERISTICS

**TROCELLEN HIGH TEMP** is the ideal solution for the thermal insulation of high temperature piping.

Characteristics and advantages:

- Made of long lasting closed cell polyethylene insulation foam
- Operating temperature: 180 °C (peak), 150 °C (standard)
- Thermal conductivity coefficient at 10°C: 0,0359 W/mK
- Constant insulation value for at least 23 years, probably longer\*
- Fire safe
- Closed cells, in order to inhibit water absorption
- Clean, non toxic, mould and bacteria resistant, odorless
- Flexible enough to follow tight angles and strong enough to withstand rough handling
- For indoor as well as outdoor applications
- Very economical.

\* TROCELLEN tested after 23 years of operation found the same insulating value. Test reports available on request.

Thermal curve simulation of a partially insulated section of piping containing coolant at 7°C, showing temperature trend.

The environmental conditions mean the dew point=-23°C: thermal bridging occurs on the non-insulated surface of the pipe, leading to condensation.

For a complete description of the product, consult the TROCELLEN HIGH TEMP brochure, of which the previous box is an extract.

DISTRICT HEATING PILLOW instead is a specific product designed to optimize district heating performance.

## MATERIALS AND RESOURCES AREA

The Materials and Resources area is an area that considers the sustainability of the building based on the materials that were used to build it. Pursuing obtaining LEED® credits in the field of Materials and Resources (MR) can reduce the amount of waste and improve the building's environment through responsible waste management and material selection.

The credits in this section focus on two important issues: the environmental impact of the materials entering the building project and the minimization of disposal. Compared to the first area TROCELLEN has chosen to use materials with the highest possible recycled content and adopt an internal environmental policy that is widespread at all levels through a CSR and particular attention to the chemicals used. Compared to the second area, it can support companies in the management of their waste through the use of recyclable packaging.

In version 4 of the rating system, the Materials and Resources area is the area that undergoes major changes, enhancing good practices of companies and their environmental and social responsibility.

The credits of LEED NC V4 to which TROCELLEN products can contribute are:

- MRc2 – Building product Disclosure and Optimization – Environmental Product Declaration
- MRc3 – Building product Disclosure and Optimization – Sourcing of Raw Material
- MRc3 – Building product Disclosure and Optimization – Material Ingredient
- MRc5 – Construction and Demolition Waste Management

**MRC2**

**Building Product  
Disclosure And  
Optimization -  
Environmental  
Product**

*Intent: To encourage the use of products and materials for which life cycle information is available and that have environmentally, economically, and socially preferable life cycle impacts. To reward project teams for selecting products verified to have been extracted or sourced in a responsible manner.*

Trocellen ha ottenuto la certificazione EPD per le seguenti famiglie di prodotto:

- Trocellen Class
- Trocellen N
- TR- EECCELL
- TROSIL

Di seguito si riportano le copertine degli EPD con indicazione dei prodotti specifici. Per consultare il documento completo contattare l'ufficio tecnico

**MRC3****Building Product Disclosure And Optimization - Sourcing Of Raw Materials**

*Intent: To encourage the use of products and materials for which life cycle information is available and that have environmentally, economically, and socially preferable life cycle impacts. To reward project teams for selecting products verified to have been extracted or sourced in a responsible manner.*

TROCELLEN has developed a **CSR - CORPORATE SOCIAL RESPONSIBILITY** and is made public at the following link:

<https://trocellen.com/sustainability/strategy-and-governance/compliance/>

By following the aforementioned policies, where possible, materials with the greatest **RECYCLED CONTENT** are chosen, such as the following:

<b>Product</b>	<b>% Recycled Post consumer</b>
AIRSILENT TECH	85%
ISOLMASS 3 TECH FR	8%
ISOLMASS 3 TECH FR ALUNET	8%
ISOLMASS 1 TECH	20%
ISOLMASS 4 TECH	14%
TROSIL TECH	43%

Furthermore TROCELLEN has developed the following BIOBASED materials:

- The TR-EECeLL product is a BIOBASED PRODUCT, as demonstrated by the test report carried out according to the Biobased Carbon Content ASTM D6866-16 Method B (AMS) standard, which attests a percentage of 98% Biobased Carbon Content (as a fraction of total organic carbon).
- MILLEFORMA COTTON is an acoustic coating for gluing walls and ceilings made of natural material (biobased material), based on cotton waste mixed with particular high quality clays and colored with natural earths.

**MRC4**  
**Building Product  
 Disclosure And  
 Optimization –  
 Material  
 Ingredient**

*Intent: To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products for which the chemical ingredients in the product are inventoried using an accepted methodology and for selecting products verified to minimize the use and generation of harmful substances. To reward raw material manufacturers who produce products verified to have improved life-cycle impacts*

Trocellen pays the utmost attention to the management of the chemicals present in the product and used in the production process, as demonstrated by the corporate certifications developed, including BS OHSAS 18001.

In the finished product there are no dangerous substances which could involve the compilation of a safety data sheet, as shown by the technical data sheets of the products available on the website <https://trocellen.com/>.

**MRC5****Construction And  
Demolition Waste  
Management**

*Intent: To reduce construction and demolition waste disposed of in landfills and incineration facilities by recovering, reusing, and recycling materials.*

With regard to the product in question, this credit evaluates the waste material and packaging on site during the laying and installation phases, to the extent that these are "diverted" from the landfill and reintroduced into a production cycle. Given that this information must be collected and calculated by the construction company, the role played "upstream" by TROCELLEN, which uses recyclable packaging, is important. The types of packaging used are recyclable. TROCELLEN uses as packaging:

- low density polyethylene film
- for tapes and stickers, paper
- cardboard boxes for ISOLMASS and APLOMB

Product waste is reduced, and in any case it can be disposed of as plastic waste.

## INDOOR AIR QUALITY AREA

To ensure the quality of the internal environment, a joint effort is required from the client, the design group, contractors, subcontractors and suppliers. Automatic sensors and individual controls to regulate temperature, humidity and ventilation can be integrated into the building system to provide an optimal indoor environment quality. Other issues regarding indoor air quality addressed by the LEED® system include verification of thermal comfort, availability and quality of natural light with access to outside views. All these issues can enhance the quality of the internal environment and optimize the confined spaces for the occupants of the building.

The credits of LEED NC V4 to which TROCELLEN products can contribute are:

- EQp3 Minimum Acoustic Performance\*
- EQc1 Enhanced Indoor Air Quality Strategies
- EQc2 Low Emitting Materials
- EQc9 Acoustic Performance

*\*Specific for LEED FOR SCHOOLS*

## EQp3 Minimum Acoustic Performance

## EQc9 Acoustic Performance

*Prerequisite intent is: To provide classrooms that facilitate teacher-to-student and student-to-student communication through effective acoustic design.*

*Credit Intent is: To provide workspaces and classrooms that promote occupants' well-being, productivity, and communications through effective acoustic design.*

The prerequisite, defined specifically for schools, considers:

- HVAC background Noise
- Exterior Noise
- Reverberation Time

The credit considers:

- HVAC Background Noise
- Sound Isolation
- Reverberation Time
- Sound Reinforcement and Masking Systems

TROCELLEN can offer an entire line of products dedicated to sound insulation.

PRODUCT FAMILY	PRODUCT	SOUNDPROOFING parameter
AIRSILENT <sup>3</sup>	FLAT AIRSILENT K	High sound absorption values $\alpha$
	FLAT AIRSILENT KP	High sound absorption values $\alpha$
	FLAT AIRSILENT AL	High sound absorption values $\alpha$
	FLAT AIRSILENT K-ALU	High sound absorption values $\alpha$
	EGG-BOX SHAPED AIRSILENT K	High sound absorption values $\alpha$
	AIRSILENT TECH	High sound absorption values $\alpha$
APLOMB	APLOMB 11	Wall sound insulation $R_w = 26$ dB Wrapped on the pipes it lowers the sound level of the waste water by 15 dB
	APLOMB 22	Airborne sound insulation $R_w = 24$ dB
	APLOMB AL/CL1	Airborne sound insulation $R_w = 24$ dB
	APLOMB 1	Airborne sound insulation $R_w = 27$ dB
ISOLMASS	ISOLMASS 11	Airborne sound insulation $R_w = 27$ dB
	ISOLMASS 22	Airborne sound insulation $R_w = 26$ dB
	ISOLMASS 1 TECH	Airborne sound insulation $R_w = 25$ dB
	ISOLMASS 4 TECH	Airborne sound insulation $R_w = 27$ dB
	ISOLMASS 4	Airborne sound insulation $R_w = 26$ dB
	ISOLMASS FR	Airborne sound insulation $R_w$ from 26 dB
	ISOLMASS 3 TECH FR	Acoustic insulation of waste water pipes: airborne noise reduction $> 10$ Db

<sup>3</sup> The AIRSILENT range consists of sound-absorbing products, useful for reducing the noise of the systems ("Hvac background noise" and the reverberation time (Reverberation time)). The Alpha Sabine parameter varies according to the frequency and thickness. the values in the table would give an unreadable result. For more information, consult the technical data sheets available or contact the technical department

PRODUCT FAMILY	PRODUCT	SOUNDPROOFING parameter
FLOORING UNDERLAY	TROCELLEN N	Impact noise reduction > 26 dB
	TROCELLEN VN	Impact noise reduction > dB
	TROSIL	Impact noise reduction > 28 dB (4mm, 5 mm) 36 dB (10mm)
	TROSIL TECH	Impact noise reduction >33 dB(10mm)
	MILLEFORMA	Sound absorption $\alpha_w = 0,45$

## EQc1

Enhanced Indoor  
Air Quality  
Strategies

*Intent: To promote occupants' comfort, well-being, and productivity by improving indoor air quality.*

TROCELLEN products in addition to thermal insulation and anti-condensation properties, guarantee to be inert to bacteria and mold, according to the VDI 6022 test.

In support of this declaration, specific tests were performed, available on request.

## EQc2

### Low Emitting Materials

*Intent: To reduce concentrations of chemical contaminants that can damage air quality, human health, productivity, and the environment.*

TROCELLEN products can be defined as low-emission products based on the tests performed \*.

The screening carried out on material samples considered representative of the entire product range, demonstrates the very low VOC emission of Trocellen products according to the ISO 16000 standard.

Screening: selected the most significant / impacting with respect to emissions
